

Name:

Graphing Practice

Aim: To investigate the effect of speed on the braking distance in wet weather.

1. What is your Hypothesis based on the aim above?

(A prediction about the results of the experiment.)

(Use "IF THEN..... BECAUSE....." statement. Make sure to explain why you think this.)

2. The investigation had the following results:

What is the independent variable?

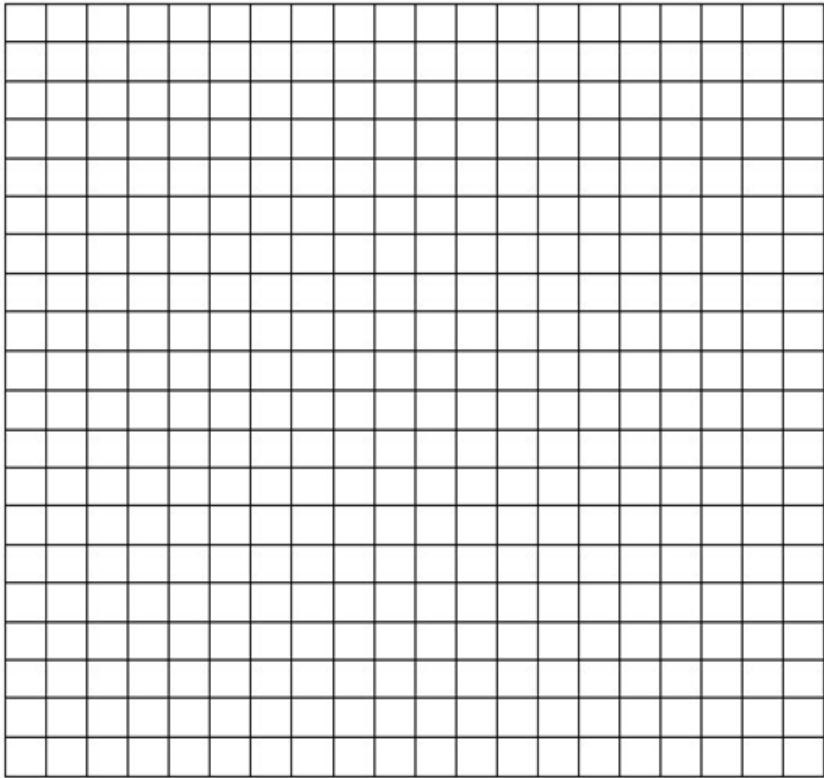

What are the controlled variables?

What is the dependent variable?

Speed (km/h)	Braking distance (m)
0	0
10	1
20	4
30	9
40	17
50	26
60	38

Plot the information above in a **LINE graph**. Label and number the x and y-axis appropriately.

Title: _____

3. What is the trend of the graph?

(words that can describe a trend: positive or going up, negative or going down, stable or not changing)

4. Use your graph to predict the following:

What would the braking distance have been:

- a) At a speed of 35 km/h?

5. Write a scientific conclusion for this experiment.

(A statement summarising the aim of the experiment and the results obtained. Did the results match the hypothesis?)
